Asbestos & Mold Removal

First Response has many years of experience in the removal of asbestos, and mold from a wide variety of commercial, industrial, institutional & residential properties for both the private and public sectors.

Asbestos

Asbestos is a fibrous material known for its ability to absorb high temperatures and as a result was used in many homes and commercial structures as insulation. This insulation would typically be found surrounding pipes as an insulator between walls and other building materials like ceiling and floor tiles as well as adhesives. Inhaling high levels of asbestos fibres over a period of time can result in diseases for which there is no cure including asbestosis, lung cancer and mesothelioma.

First Response is your one-stop shop for recognizing potential asbestos hazards and qualifying its existence through proper testing, allowing for peace of mind. Given it is usually the legal responsibility of the building owner to take appropriate action to have asbestos removed, look no further than the experts at **First Response**, we provide a comprehensive cost-effective service that will surpass your expectations. With a wealth of experience our team will take great care to detect, identify and safely remove and dispose of this harmful material with minimal disruption to the client.

Services Provided

- Asbestos Removal
- Asbestos Survey
- Asbestos Testing

Mold

One of the biggest post-flood dangers to the health of a property and its inhabitants is mold growth. A flood in a domestic or commercial property grants mould ideal conditions in which to thrive!

Mold is the common term for fungi. There are many forms so consequently, its appearance varies. Generally, it will appear as patches of black, green, yellow, brown or pink 'furry' growths that usually have an unpleasant odour. If you can smell mould the indication is that there is a health risk as the spores and mycotoxins produced are airborne.

Molds and mildews growing in the home or business may pose health risks and/or signal water intrusion and damage that will only become more extensive and expensive as time goes on. However, if you aren't sure of the cause or source of moisture, you should consult the professionals at **First Response** for inspection and repair.

If any part of your home or business suffers from extensive water damage, call **First Response** within the first 24 to 48 hours to avoid the over growth of mold. Mold grows quickly and will begin to grow in fabrics and porous surfaces within 24 hours. **First Response** is your number one qualified mold remediation and building restoration expert.

Our technicians are highly trained and have many years of experience in mold removal and remediation. We can produce before and after results to validate the results. You can be certain that all mold will be effectively removed, and its return prevented, giving you complete peace of mind.
